A successful fatality review does not only move recommendations into action (although that is important), it also strives to continuously improve and enhance the way it utilizes data in order to make data-driven recommendations.

For the Ocean County Overdose Fatality Review Program (OC-OFRP), the recommendation to use Overdose Detection Mapping Application Program (ODMAP) data started a 2-year journey developing the Overdose Response Plan. It was not until the plan was operational that the OC-OFRP realized it was not using ODMAP to its full potential.

In ODMAP, the registered user can search any date to identify the overdose activity at that specific time. Using this feature to search dates provides the opportunity to identify what was happening in the community at the time of specific overdose decedent death.

In short, when an overdose fatality review (OFR) identifies an overdose decedent, a team member with ODMAP access can search the date of death to see the fatal overdoses, nonfatal overdoses, naloxone administrations, and municipalities in which this activity was happening. It allows the OFR to build community context on the date of the decedent’s death and ask questions like:

- Was our jurisdiction experiencing an increase in overdoses at this time or was this an isolated event?
- Were there more than one fatal overdose death on this date, and could they be linked to a fatal batch of heroin or fentanyl? Were there nonfatal overdoses? How many naloxone administrations were requested?
- Were fatal or nonfatal overdoses and naloxone administrations clustered in certain geographic areas? Are these hot spots for overdose activity?
- If you look up the days prior to and after the specific decedent’s death, was this increased activity occurring over several days?

The OC-OFRP has since added this information into each decedent case, looking at the date of overdose death and the 2 days prior and 2 days after to have the community context on overdose activity. The OFR Data System has variables to capture this information. In the decedent Case Information section, there is a question asking, “Was the death possibly connected or related to a contaminated/tainted batch or a community spike in overdoses?” ODMAP is a great tool to determine whether there was a spike around the time of the death. Also included in the County Profile section, updated annually, is a question about the level of ODMAP reporting at the county level. This question can help drive the OFR members to explore...
whether and how ODMAP is used in the county and advocate for better, more consistent reporting across all jurisdictions.

In addition, ODMAP data can be used to inform decedent case selection by looking at high-overdose municipalities or locations. The benefit of utilizing ODMAP data does not just add community context into an OFR; the data can inform other initiatives in jurisdictions to support overdose response activities.

OFR Data System Access

OFR sites can access the OFR Data System by completing the OFR Data System registration form.

Visit the COSSAP Resource Center at www.cossapresources.org.

About the Institute for Intergovernmental Research

The Institute for Intergovernmental Research (IIR) serves as the connecting point for COSSAP training and technical assistance (TTA) efforts and collaborates with Bureau of Justice Assistance (BJA) leadership and fellow TTA providers to work directly with COSSAP site-based grantees. IIR’s role includes guidance and contributions by subject-matter experts in priority COSSAP areas of focus; coordination of the COSSAP TTA network’s cadre of experts and providers; publication production and design of COSSAP resources; planning, coordination, and delivery of national-level trainings and working group meetings; COSSAP Resource Center development and maintenance; coordination of distance-learning opportunities and resource dissemination; and other complementary activities.

About BJA

BJA provides leadership and services in grant administration and criminal justice policy development to support local, state, and tribal law enforcement in achieving safer communities. To learn more about BJA, visit www.bja.gov and follow us on Facebook (www.facebook.com/DOJBJA) and Twitter (@DOJBJA). BJA is part of the U.S. Department of Justice’s Office of Justice Programs.

This project is supported by the Bureau of Justice Assistance (BJA), Office of Justice Programs, U.S. Department of Justice, and the U.S. Centers for Disease Control and Prevention by Grant No. 2017-AR-BX-K003 awarded by BJA. The contents of this document were developed by the Institute for Intergovernmental Research and do not represent the official position or policies of the U.S. Department of Justice or the U.S. Centers for Disease Control and Prevention.
